Operative Report

* Final Report *

ERICSSON, JONATHAN - H-801283627

FINDINGS: deviation of the nasal bones to the right

DESCRIPTION OF PROCEDURE: After consent was obtained the patient was taken back to the OR and laid supine on the table. Anesthesia was inducted. Time-out procedure was performed. The patient was prepped and draped in the usual sterile fashion. Afrin nasal pledgets were placed for decongestion. Then bosey elevator was used to fracture the nasal bones toward the patients left and place them back into their anatomic positions. Once in place the nasal dorsum was covered with mastisol, steri strips, and then a denver thermal splint. Doyle splints were placed into the nasal cavity bilaterally. Hemostasis was obtained . The patient was then turned back to anesthesia in stable condition. The patient tolerated the procedure well. There were no complications.

DISPOSITION: They will be transferred to the postanesthesia care unit and can be discharged home later if stable.

PRESCRIPTIONS: They will also be sent home with a prescription for Norco, Keflex, and Motrin

FOLLOW UP: in clinic in 1 week.

Dr Stern was present for the entire procedure.
